CEG 820 Project

- Choose a topic, and do either A or B.

A. Design, implementation, and/or performance analysis (deterministic modeling, analytical modeling, or simulation).

B. Technical paper review. (B is an incomplete form of A, and will get 70% of the score at maximum).

- Submit a description of your topic and a list of reference papers. (due 2/18)
- Present in the class and submit the report (report due 3/18)
- Size of the report is between 20 and 30 double-spaced pages.

Possible Topics

- Memory/cache management in multiprocessor system.
- MIMD machines
- Fault tolerant computing
- Parallel algorithms for numeric or nonnumeric computation.
- Performance evaluation of parallel computers
- Interconnection networks
- Dataflow machines
- Systolic array
- Optical computing
- Application-specific architectures, such as database machines, Image processing machine, etc.
- Artificial neural networks
- RAID (Redundant Array of Inexpensive Disks)
- Multicore Processors
- Multimedia Systems
- Cluster computing
- Grid computing
- Other relevant topics
