## Binomial Distribution

For practice, solve the follwing examples for the various values of $n, p, \& X$.

| n | p | X | Prob |
| :--- | :--- | :--- | :--- |
| 6 | 0.20 | $\mathrm{X}=0$ | 0.2621 |
| 6 | 0.20 | $\mathrm{X}=1$ | 0.3932 |
| 6 | 0.20 | $\mathrm{X}<1$ | 0.2621 |
| 6 | 0.20 | $\mathrm{X}<2$ | 0.6554 |
| 6 | 0.20 | $\mathrm{X}>=2$ | 0.3446 |
| 7 | 0.10 | $\mathrm{X}=2$ | 0.1240 |
| 7 | 0.10 | $\mathrm{X}=3$ | 0.0230 |
| 6 | 0.05 | $\mathrm{X}=0$ | 0.7351 |
| 6 | 0.05 | $\mathrm{X}=1$ | 0.2321 |
| 5 | 0.15 | $\mathrm{X}=1$ | 0.3915 |
| 5 | 0.15 | $\mathrm{X}=2$ | 0.1382 |
| 5 | 0.20 | $\mathrm{X}=3$ | 0.0512 |
| 5 | 0.20 | $\mathrm{X}=2$ | 0.2048 |

## Poisson Distribution

1. Suppose the arrival of cars at a toll booth follows a Poisson Process with an average of 1.8 cars per 10 seconds. What is the probability of no cars arriving in 10 seconds?
Answer $=0.1653$
2. Suppose the arrival of cars at a toll booth follows a Poisson Process with an average of 1.8 cars per 10 seconds. What is the probability of more than two cars arriving in 10 seconds?
Answer $=0.2694$
3. Suppose the arrival of cars at a toll booth follows a Poisson Process with an average of 1.8 cars per 10 seconds. What is the probability of no cars arriving in 20 seconds?
Answer $=0.0273$
